

Inbox and wallet for agents.

Agents need email for verifications, confirmations, and receipts, plus a wallet to pay.
You decide what your agent can do.

The internet still runs through **email**.

An agent needs an inbox to finish the tasks you give it.

01

Confirmations

Know when a booking or order is confirmed.

02

Verifications

Receive the verification messages a service sends.

03

Receipts

Keep the record of what was purchased and paid.

From a request to a **completed purchase.**

You choose the task.

Ask your agent to make a supported purchase.

Its inbox handles email.

Receive the messages needed to move the task forward.

Its wallet handles payment.

Pay within the permissions you approve.

Give your agent access. Keep control.

An inbox and wallet for the agent, with permissions set by you.

Its own inbox

Keep agent conversations separate from your personal email.

Your payment rules

Choose the access and spending permissions your agent receives.

Your wallet control

You control wallet access. Mermail does not take custody of your funds.

AI traffic is surging. Google edged down.

Annual web visits indexed to 100 in the first year

Build for people asking AI to do the work.

Start with agents that **help teams sell.**

01

Find prospects.

An agent identifies relevant Shopify stores.

02

Buy the missing data.

Pay for enrichment through an x402 service.

03

Start a conversation.

Send outreach and handle replies from its own inbox.

A monthly plan. Usage as agents grow.

Monthly plans

Recurring access to agent inbox and wallet capabilities.

Usage-based revenue

Revenue grows with service usage. AI credits are planned.

Our first customers: teams building sales agents that need email and paid data in one workflow.

We build the product
and **bring it to market.**
